We are very pleased to have your expertise and diverse community perspective on this committee. As you are aware the role of the Energy Vision Advisory Committee (EVAC) is to not only provide direct community representation and outreach, but to also review and provide recommendations regarding potential items for each two year work plan. The proposed plan will then be presented to the Clean Energy Partnership (CEP) Board for approval. When approved, the work plan will guide the work of the Partnership as well as each organization.

The work plans proposed to the Board will align with goals and recommendations from the Minneapolis Climate Action Plan as well as climate goals and program opportunities identified on page 14 of the Energy Pathways Study.

At the first CEP Board meeting in January of this year, the Planning Team presented a list of potential work plan items that are consistent with the City's climate goals and pathway opportunities identified in the links above. These items are grouped in two areas: 1) community initiatives and 2) city enterprise initiatives. The concepts have been identified by the Planning Team as viable options that align with the City's Climate Action Plan as well as the Energy Pathways Study. Some projects may begin immediately while others may take not only development time but must follow regulatory approval timelines. For your review and prioritization consideration, attached is an estimated timetable for implementation of these initiatives.

To allow for review feedback that can be constructively included in the work plan recommendations to the CEP Board; the Planning Team has designed this evaluation and feedback form to ensure all committee members are incorporating the results of their review and analysis consistently. Please complete the sections below for each initiative listed. Additionally, please include in the blank sections any other program ideas, enhancements or concepts that align with the Minneapolis Climate Action Plan and/or Energy Pathways Study you believe should be considered for inclusion in the 2015-2016 work plan.

for inclusion in the 2015-2016 work plan.
These forms and feedback provided at the next two EVAC meetings will be used to inform the CEP Board at their next meeting on May 29th of work plan ideas for their formal approval.
You will be able to re-enter the survey once you have started if you need more time to finish. To do so, use the link you received initially.

Community :	Solar	Gardens
-------------	-------	---------

The Partnership may explore a number of options for encouraging participation in Community Solar Gardens (CSGs) by Minneapolis customers. These could include City government participating as a customer of one or more CSGs for City-purchased electricity, providing information and training to neighborhoods and communities about participating in CSGs, developing a "one-stop" location for information on CSGs available to Minneapolis customers, or expanded outreach to customers to drive participation.

Xcel Energy customers can to subscribe to solar gardens - solar panel arrays constructed by third-party developers at centralized locations - and

receive credits on their electricity bills	for their portion of energy produce	d. The program is called Solar*Rewards	Community and is designed for
customers who cannot participate other	er solar programs because they rer	nt, live in multi-family dwellings, their hom	nes or businesses are not suitable
$for \ solar \ installations, \ or \ rooftop \ solar$	installations are not right for them f	or other reasons.	
Xcel Energy's Solar*Rewards® Comm	unity® program launched on 12/12	//2014.

Energy Usage and Program Participation Data Access

The City and the utilities will work together to understand energy usage and program participation information at smaller geographic level than city-wide. The City may be able to produce reports for use by neighborhoods and community initiatives, such as energy savings competitions. Energy usage and program participation data will be used to establish metrics to gauge the success of CEP activities.

Multi-Family Energy Efficience	;y
--------------------------------	----

There is much interest in programs that reach the multi-family sector. As a result, CenterPoint Energy and Xcel Energy have collectively developed and filed with the Minnesota Department of Commerce, Division of Energy Resources a, jointly-delivered energy efficiency program dedicated to multifamily buildings. The program will draw on national best practices to encourage building owners to invest in energy-saving measures in both resident and common spaces.

The program is currently in the regulatory review process.

The CEP will work collaboratively for regulatory approval of the program and explore targeted outreach and marketing opportunities to engage Minneapolis customers. The CEP may also explore expanding or existing financing options for program participants to further reduce barriers to implementation of efficiency measures.

17. What challenges do you think come with this program concept? How should they be overcome?

The CEP will leverage the availability of an expanded residential energy efficiency program and explore targeted outreach and marketing opportunities to engage Minneapolis customers. The CEP may also explore expanding or existing financing options for program participants to further reduce barriers to implementation of efficiency measures.

CenterPoint Energy has implemented a pilot program called the Residential Engagement Pilot in the City of Minneapolis to test the effectiveness of enhanced natural gas engagement strategies intended to increase the number of residential customers (in 1-4 unit properties) that follow up on and install recommendations made at home visits.

The Pilot has been approved by the Department of Commerce; Division of Energy Resources and launch is scheduled for February of 2015.
